Linkage to Country/Regional Strategy communities and livelihoods from a variety of areas including artisanal fishing, tourism, and other beach and natural resources-related activities. Coastal erosion is responsible for the loss of land, houses, infrastructure, and business opportunities and poses a high risk to human well-being, economic development, and ecological integrity. It affects negatively the livelihood of coastal communities, particularly poor households, and ultimately the coastal economies. Low cost protection solutions including natural protection such as beach dune management and mangrove are required to be developed. Natural protection is being developed internationally and India already counts successful initiatives on which SCPMIP and the proposed technical assistance can build upon. Coastal infrastructure is currently designed based on historic sea levels and wave regimes, with estimated design life of 50-100 years. Infrastructure projects will gradually become increasingly vulnerable to damage unless appropriate measures of climate resilience are incorporated. Without focused coastal climate change studies, the construction of coastal protection infrastructure and shoreline management planning proceeds largely according to current standards that do not explicitly consider climate change-related risks and vulnerabilities. With the lack of clear and officially endorsed design guidelines, planners and designers have neither the knowledge base, nor the mandate to design for potential impact scenarios under climate change. Government decision makers require adequate evidence of the risks to support the provision of additional finance for climate resilience.	Description	to the adverse impacts of climate change. It will prepare adaptation guidelines towards effective mainstreaming of climate change into coastal protection and management. 	Impact	Strengthened resilience of the Indian coast to impacts of climate change	

Project Outcome

Description of Outcome	Climate change impacts are factored into coastal protection and management interventions in India "Climate Change Adaptation Guidelines for Coastal Protection and Management in India" have been prepared and are being tested in Maharashtra and Karnataka.			
Progress Toward Outcome				
Implementation Progress				
Description of Project Outputs	 Climate change adaptation guidelines for the protection and management of the Indian coast are officially endorsed Shoreline management is climate-resilient in two focal states Coastal investments in two focal states incorporate climate resilience Institutions have strengthened capacity and raised awareness of coastal climate change and adaptation measures 			
Status of Implementation Progress (Outputs, Activities, and Issues)	Consultants are undertaking the studies with the support of local institutes. Various trainings and workshops on the climate adaptation guidelines have been held. Work on the community demonstration pilot sub-projects is moving forward in Maharashtra.			
Geographical Location				

Summary of Environmental and Social Aspects

Involuntary Resettlement

Indigenous Peoples

Stakeholder Communication, Participation, and Consultation

During Project Design	Stakeholder participation and consultation were done during project design.
During Project Implementation	Stakeholder participation and consultation are being done regularly.

Business Opportunities

Consulting Services A team of consultants comprising research scientists, coastal engineers, and specialists in natural coastal protection, community-based coastal management, and training is envisaged. The consultants will work at national, state, district and community levels, with total estimated inputs of 66 person-months (22 international and 44 national). Consultants will be engaged by ADB through a firm using quality- and cost-based selection procedures with 90:10 of technical and financial weight on a full technical proposal.

The consultancy contract package will include provisional sums to cover the costs of additional activities, namely: (i) subcontracting of three focal research institutes to provide information and data, and implement specific studies that will define and quantify coastal climate change and impacts; (ii) project management of the pilot community projects and subcontracting of local nongovernment organizations (NGOs), community organizations, or local contractors to implement natural protection activities; (iii) organization and management of training courses, workshops, preparation of awareness materials and report production; and (iv) engagement of an advisory panel of experts to review and endorse the project climate change analysis and adaptation guidelines (the members of the panel will be nominated by MOWR and maritime states and union/island territories, and approved by ADB).

Procurement

Minor procurement of equipment is planned which will follow ADB guidelines.
